

LATE-NIGHT PRACTICE SESSION · ~3:00 AM

English Speaking Practice

Raw conversation with an AI speaking coach, kept as a reference copy.

Format	Focus	Use
Spoken dialogue, transcribed as spoken	Standing / energy, mistake story, SQL wrapper close	Rehear the answers and coach cues

Fillers, restarts, and thinking pauses are left in on purpose. This is the session as it happened, not a polished rewrite. The locked-in answers and coach notes are collected after the transcript.

What this session covered

- **1. Standing and energy.** Standing while talking keeps the brain sharper and more responsive, so answers come out more clearly.
- **2. Continuous learning.** Staying in tech, going back to fundamentals, and digging deeper builds confidence.
- **3. People and influence.** Convincing others of a solution takes energy. On client or customer calls, keep moving so the brain stays alert.
- **4. Mistake and learning.** A project was at risk of missing the sprint / release. The miss was not calling it out early. The lesson: surface risk a few days before the deadline so the team can replan.
- **5. SQL wrapper close.** Tight ending: it was a wrapper over the SQL client library, and it could be used by anyone. Then stop and let the interviewer ask the next question.

Full raw transcript

Read this as a conversation. Blue is you. Warm gold is the coach. Backchannels such as “mm-hmm” are included because they were part of the rhythm of the session.

YOU

...is more sharp. And uh — you are able to answer the queries because, because your brain is more sharp and more responsive, so you are able to process the information correctly and able to respond correctly. So standing, I think, uh, helps — helped me a lot.

COACH

Hmm. Mm-hmm. Hmm.

YOU

Um, that is one thing. Apart from that, uh, technology-wise, I'm into the tech space, so technology-wise I keep on learning and keep on improving.

COACH*Right. Mm-hmm.***YOU**

Um, learning the fundamentals and, uh, digging down deeper.

COACH*Mm-hmm.***YOU**

Uh, it brings confidence. Another thing is the people aspect. So convincing the people — agreeing them to your solution — so that requires energy.

COACH*Mm-hmm.***YOU**

So that's why I said, while sitting, if I'm doing a meeting, let's say with a client or with a customer, so it takes a lot of energy. So a better approach could be you, uh, just keep on moving — use that phone if you are on a, uh, video call or audio call with him and keep on moving. And so it keeps, I think, it keeps your brain, uh, active, uh, and more, uh, alert. Uh, and you are able to better answer his queries, and your brain functions better.

COACH*Nicely.***YOU**

So as far as of now, uh, what you asked — I'm thinking of any such situation where I made a mistake and, uh, it did not go well and what I learned from it, right?

COACH*Mm-hmm. Right. Right.***YOU**

Mm-mm. I'm just thinking about it. There's nothing, uh, coming on the top of my...

COACH*Yeah, no rush. Just let me know when you're ready.*

YOU

Not coming any... it's not... yeah, that's not coming — any significant mistake or a big mistake on the top of my mind.

COACH

Totally okay. It doesn't have to be huge. Even a small miss is fine.

YOU

Okay, okay, just let me think. So it has happened, uh, there was one case. It has happened sometime back. So, I was working on one project. So it was, uh, not going to be finished under the current timeline. So I should have called it out, uh, instead of that I tried to complete it.

COACH

Mm-hmm.

YOU

Uh, I thought I may be able to complete it, but then the, um, timeline was near. So the better solution, uh, better approach would be to call it out that, uh, we are not going to make it.

COACH

Right. Mm-hmm.

YOU

So that would have given, uh, the right impression to everyone where we are with respect to that project.

COACH

Right. Mm-hmm.

YOU

So — yeah, this is some time back. So I should have, uh, done this. Should have done that 20% time before the actual project, uh, finish time, but I did not, uh, I missed doing that. That was a mistake on my end. I learned from that — that you should give a clear update, uh, if you're finding any risks, any blockers, before the project finish timeline. Then, uh, just call it out 20% time before.

COACH

Right. Great, that's crisp. Now try one line for each part. Situation, action, lesson. You got it?

YOU

Uh, yeah, sure, I got it. So the situation was I was working on a project in one of the companies. So I was supposed to finish it, uh, in that, uh, month sprint, but, uh, there were some issues I was facing and, uh, it looked like I will not be able to make it. So I should have called this out, uh, with, uh, keeping a buffer of two–three days before only — that it's difficult for this release. Uh, I did not, uh, do that. That was a mistake on my end. So what I learned from this is that, uh, if we are working on a project we should call it out, like, uh, a few days back — that you're not going to be able to make it in this release, uh, these are the reasons, and accordingly you can replan.

COACH

Mm-hmm. Right. Mhm.

COACH

Right, much tighter. Say that again but slower and with a steadier tone. Breathe between each line.

YOU

Okay. The situation was I was working on a project, uh, which was, I think, having a one-month or two-month deadline. Uh, so, uh, my task was to, uh, complete it, uh, before the end of that one-month sprint so that we can send it to the release. Uh, but I was facing some few issues, uh, in the end, which I focused on fixing, and I missed communicating it — missed communicating that, uh, we will not be able to make it in this release. That was a mistake. And that's where I learned...

COACH

Mm-hmm.

YOU

Uh, that was my learning: that if, uh, whenever you are in that situation and you think you will not be able to finish the project, uh, in the given timeline, and there is a risk of it going into the release, you should call it out a few days before.

COACH

That's clear and steady. Lock that version in.

YOU

Actually, it was a wrapper over the SQL client library, yeah. So it was — it could be used by anyone.

COACH

Mmm. Nailed it. That's tight and clear. Stop right there in an interview and let them ask the next question.

YOU

Okay.

COACH

Good work.

YOU

Okay, great. Do you have anything else? Or shall I go to sleep? It's 3 AM in the morning. It's 3 AM in the night.

COACH

One moment. Go get some sleep. 3 a.m. is late, and you've done some solid work. Just to give you some feedback in summary: you've got good structure, real examples, and great technical depth. Just trim your words by about a third in real time and you'll sound even more senior. Sleep now. Practice tomorrow. You're progressing.

YOU

Okay, that's great. Okay, that's great. That's, uh, helpful feedback, that's valuable feedback.

COACH

Great.

YOU

Uh, sure. Uh, I will keep this, uh — and, uh, I will improve, uh, more on to be, uh, more on to my speaking skills and the conversation.

COACH

Great. Sleep well. You got it.

YOU

Okay, thank you. Bye.

COACH

You're welcome.

Locked-in versions for practice

These are the versions the coach asked you to keep. Practice them slowly, with a breath between lines.

Mistake story · Situation → mistake → lesson

Situation. *I was working on a project with about a one-month sprint deadline, so we could send it to the release.*

Mistake. *Near the end I was facing a few issues. I focused on fixing them, and I missed communicating that we would not make this release.*

Lesson. *If I think we will not finish in the given timeline, and there is a risk to the release, I should call it out a few days before so the team can replan.*

SQL wrapper close · stop after the headline

“Actually, it was a wrapper over the SQL client library, so it could be used by anyone.”

Coach cue: that is tight and clear. Stop there in an interview and let them ask the next question.

Standing / energy point

Standing helps. The brain stays sharper and more responsive, so you process information better and answer more clearly.

On a video or audio call with a client, keep moving. It takes less sitting-energy, keeps the brain alert, and you handle queries better.

Alongside that: keep learning the fundamentals and digging deeper. That brings confidence. The people side — getting others to agree to a solution — also takes energy.

Coach feedback from this session

What was working	Good structure, real examples, and strong technical depth. The mistake story became crisp after the second pass. The SQL close was tight.
What to tighten	Trim about a third of the words in real time. That will sound more senior. Lead with the point, then stop.
How to deliver it	Slower. Steadier tone. Breathe between each line: situation, then action / mistake, then lesson. Do not rush just because the idea is clear.
Interview habit	Give the tight version, then wait. Let the interviewer ask for depth. Do not keep adding after a strong close.

Practice reminder

Situation → Action / Mistake → Lesson. Then stop.

Clear thought. Calm delivery. Strong conviction. One point at a time.

End of transcript. Practice the locked versions tomorrow, slower, with a breath between lines.
